

Go India Stocks - NextJS Frontend- Selection Assignment

Please create the below UI (Figure 1, Figure2, Figure 3- Different aspect of a single page) in NextJS based on the below instruction

Assignment Instruction

- Tailwind CSS is compulsory to be used for styling and responsiveness.
- Ensure that the design is responsive as shown in the below figure
- You are required to populate the content using dummy data as shown in the figure. Create a separate repository folder in which all the raw data will be fed. Similar to API Calling (instead of getting data from API, hardcode it)
- It is acceptable if the Dummy data is not exactly matching (approximate match will do).
- Major things that are tested is how the screen adjusts when the side bar is opened and also the mobile responsive part.
- Assignment would be evaluated on the way different components are written/organized. Code writing principles to ensure easy reading and modular development should be followed

Submission Instruction

- Share the code on git, with specific instructions on how to run it. Mail the git link containing the solution along with your resume on ashish@goindiaadvisors.com

For any Clarification please contact Ashish Prasad (Product Manager - AI) @ ashish@goindiaadvisors.com - Website - www.goindiastocks.com
